

Surgical Innovations (SI) was pleased to welcome Dr Fabio Chiarenza, a Paediatric Surgeon from Italy, who recently visited our head office to take part in a series of design-led discussions with our expert concept and product development teams.

Dr Chiarenza was accompanied by our Italian distribution partner on the visit, where feedback on our 3mm range for ultra-minimally invasive surgery and input into new potential product lines for paediatrics was at the top of the agenda.

Such meetings with forward-thinking surgeons support SI's move into ultra-minimally invasive surgery. Our 3mm diameter devices are ideally suited for use in paediatric surgery where smaller instrumentation is often required.

Katherine Sloggett, Global Sales Associate at SI, said: "We were honoured to host a visit from such an active and influential surgeon in European paediatric surgery and this shows our continued focus on building strong relationships within the field. There are exciting opportunities available to Surgical Innovations within paediatric surgery and we hope that we can continue to form successful partnerships with key figures, such as Dr Chiarenza. By bringing our ideas together and by utilising the technology available to us, we hope to continue to push the boundaries and further develop innovative instrumentation for this very specialist market."
