

Surgical Innovations (SI) attended the World Congress of Endoscopic Surgery held in Puerto Vallarta, Mexico last week which is one of the largest surgeon meetings in Latin America. The congress provided SI with a fantastic opportunity to advance knowledge of the clinical benefits of our products in Mexico.

There was an overwhelming interest in the PretzelFlex® - the world's first reusable pretzel-shaped liver retractor – and the Resposable® laparoscopic port access system YelloPort+plus™ which combines reusable and disposable components to provide cost saving in hospitals while retaining high quality.

The congress was attended by surgical experts from all over the world who specialise in all areas of minimally invasive surgery.
