

Surgical Innovations (SI) exhibited at the Global Manufacturing Festival (GMF) in Sheffield on Thursday 22nd March to show our support for Yorkshire-based manufacturing.

The GMF is for businesses operating in the high technology, high quality, export led manufacturing supply chains. SI's 'in-house' manufacturing facilities are the perfect example of British expert precision-engineering in action, with our innovative medical devices exported to over 40 countries around the world.

Our stand proved popular at the exhibition with delegates stepping in surgeons' shoes to use our laparoscopic surgery trainer. Delegates took part in a competition to see who could stack the most sugar cubes inside the plastic abdomen using SI's Logic™ reusable graspers, demonstrating the depth perception learning curve surgeons encounter when training.

The winner of the sugar cube competition, and a sparkling bottle of champagne, was Gemma Arnett who stacked an impressive 8 sugar cubes!
