

Surgical Innovations (SI) enjoyed a successful MEDICA 2012 last week, meeting with its international network of distributors in Dusseldorf, Germany to discuss both current business and future innovations planned for next year.

Our distributors are excited about SI's product development programme and the two new additions to the SI Brand product range – Logi™Cut 3mm laparoscopic scissor and PretzelFlex™ 3mm – both of which ensure that our 3mm range for 'ultra' minimally invasive surgery remains the innovative choice for forward-thinking surgeons.

MEDICA is the largest international tradefair in the world so offers an ideal opportunity for SI to meet with existing distributors, discover the newest market developments and assess new business opportunities.
