

Surgical Innovations Group plc (AIM: SUN), the designer and manufacturer of creative solutions for Minimally Invasive Surgery ('MIS'), exhibited at the Annual Meeting of European Society of Paediatric Endoscopic Surgeons (ESPES) in Marseille last week.

The three-day event was the perfect opportunity to showcase the 3mm PretzelFlex™, our innovative organ and tissue retractor, to an international gathering of paediatric surgeons. With its perfect combination of innovation and functionality, the unique pretzel shape provides strength, improved access and visualisation of surgical sites.

Laparoscopic surgery on younger patients has always required smaller, more precise instrumentation, we are now experiencing similar demands in general surgery with the focus on reduced port site trauma and improved patient cosmesis.

The challenges of developing high-quality 3mm instruments have been overcome by the skilled design team at SI, who have created strong, rigid and functional instruments despite their smaller size.

Katherine Sloggett, Clinical Support Manager at Surgical Innovations said: "Exhibiting our product ranges at ESPES this year has highlighted that the development of our devices are in line with the clinical needs of paediatric surgeons, establishing Surgical Innovations firmly at the forefront of product development in paediatric surgery."
