

Surgical Innovations (SI) – the designer and manufacturer of creative solutions for Minimally Invasive Surgery (MIS) - is proud to support King's College Hospital by donating a variety of surgical instruments for use in their recent 'Introduction to laparoscopic suturing and educational skills' course.

Organised by SI's Clinical Advisory Board member Philippe Grange and run through the Department of Postgraduate Medical & Dental Education (PGMDE), the interactive workshop caters for medical students, surgical trainees, senior surgeons and veterinarians. It aims to develop suturing skills using advanced educational concepts. Throughout the course a variety of SI's instruments and ports were used including the pioneering 3mm instruments for use in 'Ultra' MIS.

Katherine Sloggett, Clinical Support Manager at Surgical Innovations, said: "It is a pleasure to be able to support the training of surgeons in laparoscopic basic skills from early on in their career. Our instruments are high quality, easy to use and are extremely ergonomic, especially our horizontal handle which provides a natural extension to the surgeon's hand. A perfect tool for any trainee surgeon."
